Abstract (en)

[origin: WO2014096111A1] The invention relates to a use of an illuminant for the hardening of a lining hose, with at least one layer which can be hardened by electromagnetic radiation and/or which is hardened, wherein the at least one hardenable and/or hardened layer has at least one fibrous band impregnated with at least one resin, wherein the illuminant provides or can provide at least fifty percent (50%) of the radiation energy in a wavelength range of 351 to 800 nm, more particularly in a range of 380 nm to 800 nm, more particularly in a range of 380 nm to 700 nm, preferably in a range of 390 nm to 470 nm, or in a range of 400 nm to 800 nm, and a method for hardening lining hoses.
