Abstract (en)
[origin: WO2014095464A1] The invention proceeds from an optical circuit board having: at least one substrate (12); at least one optical waveguide (14) arranged on the at least one substrate (12); at least one protective cover (16) in the form of a jacket layer, which covers the at least one optical waveguide (14) at least in part; and at least one aligning element (18) in the form of jacket layer side faces, which aligning element is provided to align at least one coupling unit (20) relative to the at least one optical waveguide (14), at least in part. According to the invention, the at least one protective cover (16) is integrally formed with the at least one aligning element (18), at least in part.
