Abstract (en)

[origin: WO2014095850A1] The invention relates to a method and a system for terminal device-based communication between third-party applications and an electronic wallet. The method comprises the following steps: (a) the third-party application establishes a connection to an Internet service, wherein the connection requires a transmission of data to the Internet service; (b) the third-party application receives a query aimed at the transmission of the data specified from the Internet service; (c) the third-party application passes the query received from the Internet service in step (b) to the electronic wallet; (d) the electronic wallet processes the query and generates a corresponding response; (e) the response from the electronic wallet is forwarded to the Internet service; (f) the third-party application receives a confirmation of the successful forwarding of the response to the Internet service in accordance with step (e).
