Abstract (en)

[origin: WO2014096345A1] The invention relates to a method for learning traffic events (212, 213, 214, 215), said traffic events (212, 213, 214, 215) being transmitted to a data network using vehicle-to-X communication. The traffic events (212, 213, 214, 215) comprise position data and time data assigned to the traffic events (212, 213, 214, 215), and the traffic events (212, 213, 214, 215) are stored electronically in the data network. The method is characterized in that an individual storage duration is determined for each traffic event (212, 213, 214, 215), and the traffic event (212, 213, 214, 215) is deleted from the data network after the storage duration expires. The invention further relates to a corresponding system and to the use thereof.
