Abstract (en)
[origin: WO2014095713A2] The invention relates to a light module (1) having a plate-shaped active element (20), which is in particular formed by an OLED or QLED, and a plate-shaped, transparent carrier element (10) having a surface on which the active element (20) is arranged, wherein the carrier element (10) has an edge region that protrudes in relation to the active element (20). According to the invention, an optical element (60) is arranged on a side of the carrier element (10) opposite the active element (20) and is designed to form a light-emitting area (50) of the light module (1), which is widened compared to the area of the active element (20).
