Abstract (en)
[origin: WO2014096677A1] The invention pertains to an electrical equipment module (200) to be engaged in an opening (2) formed in a panel (1) of a hollow barrier, comprising: - a base (210) made of an insulating material that comprises a side wall (212) that opens forward and a rear wall which, combined, delimit an inner space, as well as an outer pathway (214) that borders the side wall and barriers disposed between said inner space which delimit at least one housing accommodating an electrical connection terminal, - at least one deployable unit for fastening the base to the panel of the hollow barrier, which is mobile between a retracted position and a deployed position, and - at least one element for manipulating said deployable unit, whereof an accessible portion is located in the inner space.
