Abstract (en)

[origin: GB2509063A] A device for forming, at ambient atmospheric pressure, gaseous plasma comprising active species for treatment of a treatment region is disclosed. The device comprises a plasma cell 12 for forming the gaseous plasma. The plasma cell 12 comprises an inlet 16 for receiving gas from a source 18 and an outlet 20 for discharging active species generated within the plasma cell. A dielectric substrate 22, preferably made of a polyimide encloses around a flow path for gas conveyed from the inlet to the outlet and an electrode 26 is formed on the dielectric substrate 22 for energising gas along the flow path to form active species. A protective lining (32 Figure 2) is located on an inner surface of the dielectric substrate 22 for resisting reaction of the active species with the material of the dielectric substrate 22. An earth electrode (140 Figure 8) comprising an electrode formed on a dielectric substrate substantially surrounds and at least partially overlaps the plasma cell 12.
