Abstract (en)
[origin: WO2014094215A1] A cooling unit including at least one heat exchanger is provided. The heat exchanger comprises an inlet for receiving coolant from a coolant supply and an outlet to exhaust coolant to a coolant return, an input line in fluid communication with the coolant supply and the inlet of the heat exchanger, an output line in fluid communication with the outlet of the heat exchanger and the coolant return, a transfer line comprising a component configured to allow fluid communication from the output line to the input line, and a controller configured to control a flow rate of coolant delivered by the transfer line.
