Abstract (en)
Disclosed are a shoe sole and a manufacturing method for the same. In order to enhance flexibility and softness of a shoe sole, there are provided a midsole (10) that is disposed beneath an upper (12) of a shoe; one or multiple protrusions (20) that protrude in a downward direction from a lower surface (11) of the midsole; an outsole (30) that includes an upper surface (31) attached to a lower surface (11) of the midsole and includes one or multiple holes (32) that are disposed in an inner side, the protrusion passing through the outsole (30); and one or multiple outsole pieces (40) that are attached to beneath each protrusion. With the above configuration, it is possible to effectively absorb the impact due to prompt deformation of the sole when a user walks along an uneven, protruded ground.
