Abstract (en)

[origin: CN104944187A] The present invention relates to a method for winding up flat products, comprising the steps: - at a first height of a winding point (2) relative to a wound sheet-like product, rotary receiving the wound sheet-like article on the winding point (2), wherein the rotation of the winding point (2) generated by the supply of the wound-area product, and - moving the winding point (2) of the first height to a second height from the wound-area products above the first level, and - in the second level of the winding body (2) opposite the wound flat products, rotary receiving the sheet-like products to be wound on the winding body (2), wherein the rotation of the winding point (2) is generated by a first drive.
