Abstract (en)

[origin: EP2937787A1] Disclosed are a method for obtaining print processing time and an electronic device having a print function which can be connected with a printer. The method comprises: a print instruction is executed to make the printer perform a print operation on a first file while the current system time of the electronic device is recorded, referred to as time1; it is looked up in the print folder corresponding to the printer in the electronic device whether there is a second file with the extension.SPL corresponding to the first file; when the second file is found, the creation time of the second file is read, referred to as time2; it is detected in the print folder that whether the second file has been modified to a third file; when the second file is detected to have been modified to the third file, the modification time of the second file is read, referred to as time3.
