Abstract (en)
A power conversion system (10) includes a power source (14), a matrix converter (12), and a controller (18). The power source (14) is configured to produce an input power. The matrix converter (12) is configured to convert the input power to output power and includes a plurality of normally-on switches and a plurality of normally-off switches. The controller (18) is configured to control the plurality of normally-on switches and the plurality of normally-off switches to control the output power. The plurality of normally-on switches provide the input power directly as the output power when the controller (18) is inactive.
