Abstract (en)

[origin: WO2014101961A1] The present invention pertains to a water heater receptacle in the form of a containment means for heating and boiling water, said receptacle defining an inner volume where water to be heated is preserved, the internal base of said inner volume being in fluid communication with a transfer means directly or through a transfer conduit. Said conduit's inlet opening extends to the surface of said inner volume in the manner to be arranged to form a mechanical connection with the internal base.
