Abstract (en)

[origin: WO2014096074A1] The invention relates to a method and a device for cold stamping onto a three-dimensional article. In a first step, an adhesive is applied to the article (4) at a first workstation (1). In a second step, a transfer film (21) is pressed onto the article by a pressing device at a second workstation (2). At the same time, the adhesive is cured at the second workstation. As a result, the decoration material of the transfer film adheres to the article (4) at those points of the article which are provided with adhesive. If, following this, the transfer film is removed from the three-dimensional article after being pressed on, the decoration material remains on the article at the desired points. At the points, at which no adhesive was applied to the article (4) in the first step, the decoration material does not adhere to the article, but rather remains on the carrier film of the transfer film (21).
