Abstract (en)  
[origin: US2014185964A1] A closure for a container including a base having a passageway extending therethrough. At least a portion of the base is configured to attach to at least a portion of an opening of a container such that the passageway is in registry with at least a portion of the opening. A cap is movably attached to the base. The cap is movable between a first position in which at least a portion of the cap blocks at least a portion of the passageway and a second position in which the cap is spaced-apart from at least a portion of the passageway to allow contents from within the container to pass therethrough. A seal is positioned on one of the cap and the base.
