Abstract (en)

[origin: WO2014124758A1] The invention relates to a method for warning persons in the vicinity of an HF field-emitting device, in particular an ETCS (European Train Control System) antenna (5) of a rail vehicle (1), and a corresponding device. In order to be able to reliably warn persons of the presence of radiation that is detrimental to health, according to the invention, the HF field is extracted by means of an antenna arrangement, the extracted signal actuating, by means of a power-measuring device, a signaling device for the optical and/or acoustic signaling of an ON/OFF state of the device, in particular the ETCS antenna (5).
