Abstract (en)

[origin: US2014189876A1] A non-transitory computer readable medium may include executable instructions which, when executed by a processor, cause the processor provide for a repository of digital content and to create a first license based on the digital content. The instructions further cause the processor to transmit the first license and the digital content to a non-destructive testing (NDT) device, and wherein the digital content is configured to be executed by, used by, or displayed by the NDT device, or a combination thereof, based on the first license.
