Abstract (en)

[origin: WO2014102461A1] The invention concerns a smart card (10) comprising a card body (13) provided with a cavity in which an electronic module incorporating a microelectronic chip (12) is inserted, and at least one security marking designed to authenticate a component of the smart card, characterised in that it comprises a first security marking (11) disposed on the microelectronic module (12), and a second security marking (14) disposed on the card body, and in that the two security markings are linked by a visual identity or matching relationship indicating that the microelectronic module (12) and the card body (13) are original components assembled when the smart card was manufactured.
