Abstract (en)  
A reusable target device is used on with a golf swing practice mat having a teeing aperture formed therein to take the place of the collapsible tee conventionally used for teeing a practice golf ball thereon. The target device has i) a base flange portion received below the practice mat, ii) a stem portion extending upwardly from the base flange portion through the teeing aperture in the practice mat, and iii) a target portion supported at the top of the stem portion to simulate a golf ball to be struck during a practice swing. The base flange portion, the stem portion and the target portion are integrally and seamlessly formed with one another of a resilient material with a hollow passage arranged to be externally vented and collapsed upon impact by a swinging golf club.
