Abstract (en)

The present invention relates to a holding device for screwing in a screw, which relates to a device used to facilitate screwing a screw into a surface by means of an electric or manual screwdriver. The device comprises a continuous body with a characteristic outer surface and a bore communicating a top opening with a bottom opening of the body, the bore having a series of elastic longitudinal ribs. The device facilitates the positioning, tightening, guidance and release of the screw and the screwdriver, even in hard-to-reach places.
