Abstract (en)

[origin: WO2015165982A1] The invention relates to L-shaped sheet metal parts (21) having an angled longitudinal recess (23), and to a reinforced concrete-/prestressed concrete component having at least one upper and at least one lower longitudinal reinforcement layer, and having a transverse force reinforcement, the dimensions of which extend beyond the uppermost and lowermost longitudinal reinforcement, and which is formed by the L-shaped sheet metal parts (21) according to the invention having stirrups (30) attached in the longitudinal recess (23). The reinforced concrete-/prestressed concrete component according to the invention is suitable for increasing the break-through strength in the region of ceiling props of flat ceilings.
