Abstract (en)  
The present invention relates to a bracket 22 for an access platform. The bracket 22 for an access platform comprises a main body 42 defining a channel configured to receive and provide a close fit around an elongate member 16 of the access platform. The bracket for an access platform further comprises first and second connection arrangements 46, 48 mechanically coupled to the main body 42 and extending from oppositely directed sides of the main body. Each connection arrangement is configured to mechanically couple to a further elongate member 50, 52 of the access platform.
