Abstract (en)
[origin: EP2940413A1] Abstract: A refrigerator comprises an outer box, an inner box which is provided within the outer box, a vacuum heat insulating material which is provided between the outer box and the inner box, and seal materials or heat insulating members which are provided at some of the corners of the outer box. The seal materials or the heat insulating members exhibit fluidity or elasticity when forming the some of the corners by bending a continuous plate.
