Abstract (en)
[origin: WO2014106868A1] A cutting machine (MS) for cutting panels ((P); (S1), (S2), (S3)) provided with a cutting device ((CM), (UT)). The cutting machine (MS) comprises, furthermore, a pusher equipment (S), which is provided with clamping devices ((PM1), (PM2), (PM3)) to move the panels ((P); (S1), (S2), (S3)) from and to a cutting line (LT) and is also provided with its own driving device (MTT). The clamping devices ((PM1), (PM2), (PM3)), in their lowered operating position on the working table, are suited to freely move forward and backward without an autonomous drive of their own and are provided with respective locking means ((DB1), (DB2), (DB3)), which are suited to cause them to be selectively integral to the pusher equipment (S), so as to be moved together with the pusher equipment (S), only and exclusively using the driving device (MTT) of the pusher equipment (S) itself".
