Abstract (en)

[origin: WO2014102366A1] The present invention relates to a crashed ice making machine (1) comprising an ice container (4) having at least one partition (5) wherein water can be filled and that enables ice to be formed by the water filled therein being frozen in the cold environment; an ice dispensing mechanism (A) that enables the ice to be pushed out of the ice container (4), an ice cutting mechanism (B) that is placed at the inlet portion of the ice container (4) and that cuts the ice pushed out of the ice container (4) by rotating thus providing crashed ice, and a driving mechanism (D) that drives the ice dispensing mechanism (A) and the ice cutting mechanism (B); and also relates to a refrigerator wherein the said crashed ice making machine (1) is used.
