Abstract (en)

[origin: WO2014106611A1] A method for analysing a cable into which a first reference signal g is injected, characterised in that it consists of calculating the dynamic correlation between a measurement f of the reflection, against at least one irregularity of said cable, of said injected signal g and a second reference signal gp equal to the first reference signal g weighted by a modelling function of the propagation of a wave along said variable-frequency cable.
