Abstract (en)  
A floor scrubbing machine, which comprises a footing (2) that supports at least one brush (3), which can be actuated rotationally by an actuation assembly (4), at least one device (5) for dispensing a washing liquid, a squeegee (6) arranged to the rear of the brush (3), and at least one device for aspirating from the floor the washing liquid and the dirt removed by the brush (3). The machine further comprises a pair of box-like bodies (7a, 7b), each of which forms a respective tank for containing a liquid processed by the machine. The box-like bodies (7a, 7b) are stacked on each other on the footing (2). Removable retention means are provided which act between the footing (2) and the box-like body (7b) that lies above the other box-like body (7a) in order to retain the box-like bodies (7a, 7b) against each other and against the footing (2).
