Abstract (en)  
[origin: US2015314905A1] The present invention relates to a winding reel for a label dispenser and a method allowing a roll of a wound-up label carrier tape to be easily removed from the winding reel. A first rod of the winding reel is connected to a rotating element in a movable manner and at least two additional rods are connected to the rotating element in a stationary manner. An operating element is pivotably arranged on the free ends of the two stationarily arranged rods, where the operating element is connected to the free end of the first rod and configured such that it causes a deflection of the free end of the first rod in the direction of the rotary axis.
