Abstract (en)

[origin: EP2942331A1] The present invention relates to a low-transmission dark mist green glass composition, more specifically relates to a low-transmission dark mist green glass composition in which Fe_2O_3 , CoO , Se and Cr_2O_3 are used as coloring components within a specific content range where for the coloring components the relative contents of $(\text{CoO}+\text{Cr}_2\text{O}_3)$ to Se and CoO to Cr_2O_3 are restricted to certain ranges and accordingly the visible transmittance (LT_A) is effectively controlled and thus a blocking performance for privacy is satisfied; the solar energy transmittance (T_e) and the UV transmittance (T_{uv}) are lowered, and accordingly the cooling load for vehicles, buildings and the like is reduced and interior materials and people protection against UV rays is obtained; and the optimal range of chromaticity diagram of transparent colors is satisfied which accordingly reduces eyestrain and provides psychological stability.
