Abstract (en)
[origin: CN105088517A] The invention relates to a knitting needle and a needle holder, and particularly provides a knitting needle (1). The knitting needle is provided with a bearing section (2) including a longitudinal extension, a lower limit wall (4), an upper limit wall (5) and two side limit walls (6, 7), wherein the limit walls (4-7) are parallel to the longitudinal extension; a work area at one end of the bearing section (2) in the longitudinal extension direction, and a needle foot (14) at the other end of the bearing section (2) in the longitudinal extension direction, wherein the needle foot protrudes and exceeds the bearing section, and at least partially extends parallel to the longitudinal extension. It is expected that under the condition of less amount of consumption, the knitting needle can be reliably fixed on the needle holder, and the needle foot extends out of the side edge and exceeds at least one side limit wall.
