Abstract (en)
[origin: EP2942459A1] A lock comprises a mounting (1) including a flange (2) for attachment to a frame of a locker. An elongate hasp (6) is seated within a bore (5) of the mounting so as to protrude through a through-hole in a door that lies substantially at right angles to the frame. The hasp (6) has an eye (10) at a protruding end of the hasp, for locking the door with a padlock. The hasp (6) is rotatable about an axis of the hasp with respect to the mounting (1), so that in the event of a blow to the body of the padlock, the padlock and hasp will rotate to absorb the force.
