Abstract (en)  
[origin: WO2014108606A1] The invention relates to a disposable assembly (1) having a closed body (5) used to contain a first component and comprising a side surface (6), a bottom (7), and an upper opening. The bottom (7) has a mounting projection (12) facing the interior of the body (5), to be inserted, such as to be sealingly fit, in the complementary shaping of the lower end (14) of a hollow lower tubular element (13) used to hold a second component (4), while the other end (15) thereof is closed by a sealing means (16). A seal (17) is sealingly mounted on the opening (8) of the body (5) by screwing, snap-fitting or nesting. The seal (17) and the sealing means (16), or the seal (17) and the hollow tubular element (13) can form one part. Said invention is of interest to producers of paints, varnishes, primers and other products to be sprayed by means of a gun, as well as to gun manufacturers.
