Abstract (en)
[origin: WO2014108413A1] The invention relates to a casting/rolling installation for producing hot-rolled strip. In order to save investment costs for the roll changing device in a corresponding installation with two parallel casting lines, without a roll change taking place in the process in a less operationally reliable and more complicated manner, it is proposed according to the invention to configure the roll changing device in the form of a rotary table and to arrange the latter in the intermediate space between the two casting lines.
