Abstract (en)

[origin: WO2014108300A1] The invention relates to a device and a method for environmental sensing by means of a signal converter and an evaluating unit, wherein signals received from the environment having a first pulse response length are filtered in dependence on propagation time at a first time during a measurement cycle and signals received from the environment having a second, longer pulse response length are filtered in dependence on propagation time at a second, later time within the same measurement cycle.
