Abstract (en)

[origin: WO2014108312A1] The invention relates to a system with a security device (1) of a motor vehicle (2), which security device can be set into communication with a mobile identification encoder (50), with a drive (20), which can be brought into mechanical operative connection with a movable part (3) of the motor vehicle (2), of the security device (1), with which an authentication interrogation, in particular an access and/or driving authorization interrogation can be carried out, a control unit (10) with which, in the event of a positive interrogation result, the security device (1) can be switched from a locking status into an unlocking status and the drive (20) can be activated in order to open the movable part (3).
