Abstract (en)
[origin: WO2014107787A1] A mobile gaming device may be a player's own personal tablet, 5 smartphone, PDA, etc., with an application program installed via the internet for carrying out a remote gaming session. All gaming functions are carried out by a stationary gaming terminal communicating with the mobile device, such as by using WiFi. The mobile device operates as a user interface. Registration for the mobile device may be via a registration terminal connected in a network with a plurality of gaming terminals. The mobile device may communicate wirelessly with the registration terminal, and the registration terminal then communicates with the played gaming terminal via the network. The mobile device may select to play games offered by any available gaming terminal. The gaming terminals may be gaming machines. The registration terminal may also be a cashing out terminal and print a ticket.
