Abstract (en)

A non-slip sole structure of fishing shoes contains a sole (20), a profile of which corresponds to that of a bottom end of a body (10). The body (10) includes two groups of hooks (11), one being arranged on a forefoot position thereof and the other on a heel portion of the bottom end thereof. The sole (20) includes a slot (21) defined on a middle section thereof to space apart two group of hooks (11). Each hook (11) has two extending sections extending outward from a bottom end thereof, and a length of the slot is greater than a size of each hook (11), such that after the sole (20) is retained and glued with the bottom end of the body (10), a gap forms between the slot (21) and the two groups of hooks (11). The sole (20) also includes plural V-shaped cutouts (22) arranged on a forefoot position thereof and a heel portion thereof to correspond to and retain with the two groups of hooks (11).
