Abstract (en)
[origin: WO2014111366A1] Device (100) for driving fastening elements (110) into an underlying surface, having a mount (120) for a fastening element (110), having a through-passage for a driving-in element, by means of which a fastening element in the mount is driven into the underlying surface in a driving-in direction (170), having a strip lead-through (180), which defines a strip plane and a transporting direction and is intended for a fastening-element bearing strip core (130), having a supporting element (210) for supporting the strip and/or a fastening element, and having a supporting spring, wherein the supporting element can be deflected transversely to the driving-in direction, counter to a force of the supporting spring, when a fastening element is moved in the driving-in direction by the driving-in element in order for the fastening element to be separated from the strip.
