Abstract (en)  
[origin: WO2014111284A1] A container with a closure device (10) with a frame (1), which defines an opening (9), and with a lid (2), which covers over the opening (9) and has at least two closing means (4, 5). The lid is coupled to the frame (1) such that it can be pivoted between an open position and a closed position via a pivot axis (3). First and second spaced-apart closing means (4, 5) of the lid (2), said closing means each being formed from a lid portion and an associated frame portion, can be opened by a force being applied directly to the associated frame portion (4.1) or to the associated lid portion (4.2).
