Abstract (en)
[origin: CN105084227A] The invention relates to a crane provided with a crane column (1) and a base (4); the crane column has a tubular column lower part (3); the tubular column lower part has a lower bearing portion (5) and an upper bearing portion (6), which are used to support the crane column and laminated in the base; wherein the column lower part can rotate relative to the base through rotation equipment. Moreover, at least one pipeline (7) extends from the lower bearing portion to the upper bearing portion; the pipeline is connected to an inlet part (15) of a rotation distributor (8) above the upper bearing portion; in the inlet part, a loosening facility (10) for disconnecting the pipeline and the rotation distributor is arranged; an opening (9) in the same height of the loosening facility is arranged in the crane column, and through the opening, the loosening facility can be touched out of the crane.
