Abstract (en)
[origin: WO2010044739A1] A board fixture (1) for flush joining of a first building board and a second building board, said board fixture having a first, front flange portion (2), a second, rear flange portion (3), and a web portion (4) connecting the flange portions, wherein the flange portions and the web portion, on the one hand, form a first open space (5) for receiving an edge portion of the first building board and, on the other hand, a second open space (6) for receiving an edge portion of the second building board. According to the invention, the web portion exhibits a plurality of through openings (7) for allowing an adhesion agent to spread between the first open space and the second open space for the formation of an adhesion joint between the longitudinal edges of the building boards. The invention also relates to a method for joining two building boards by means of such a board fixture.
