Abstract (en)
[origin: US2015340802A1] A plug connector for a single-core or multi-core electrical line comprises a plug which comprises a plug body having an end face and at least one connector pin projecting from the end face; a coupling which comprises a coupling body having an end face, wherein at least one reception opening is arranged in the end face of the coupling body for plugging in the at least one connector pin of the plug for establishing a connection; an actuable closure for holding the plug body at the coupling body with a connector pin plugged into the reception opening; and at least one sealing element composed of an elastically deformable material for sealing the connection between the plug and the coupling. The at least one sealing element is clamped between the end face of the plug body and the end face of the coupling body while being deformed when the closure holds the plug body at the coupling body.
