Abstract (en)  
[origin: WO2014114678A1] The invention relates to an application device (100, 200, 300) for applying fluid medium to a substrate (1, 101, 201) that is moved in an advancement direction (V) in relation to the application device (100, 200, 300), particularly for applying glue to labels or sleeves that are intended to be applied to cigarette packs, comprising a plurality of valve main bodies (4, 104, 204) each having at least one discharge opening. In said application device, adjacent valve main bodies (4, 104, 204) are optionally arranged so as to be movable relative to one another in a movement direction (Q) in such a way that the distance of the discharge openings of adjacent valve main bodies (4, 104, 204) at an angle to, particularly perpendicular to, the advancement direction (V) can be changed.
