Abstract (en)  
[origin: WO2014114757A1] In a lighting strip system (1) having an elongate support arrangement (5) for holding lamp units and lines for electricity supply and/or signal transmission, the support arrangement (5) has an I-shaped profile in cross section, with two receiving regions (A, B), which run in the longitudinal direction of the support arrangement (5) and are separated by a preferably vertically aligned partition (11), wherein the lines for electricity supply and/or signal transmission (23) are arranged in one of the receiving regions (A, B) and operational devices (22) of the lamp units are arranged in the other receiving region.
