Abstract (en)  
[origin: WO2014115051A1] A locking mechanism for locking a first connector with a second connector, comprising: an annular housing having a first side and a second side opposite to the first side; and a locking member received in a slot formed in a side wall of the annular housing and having a first locking portion and a second locking portion, wherein when the first connector is inserted into the annular housing from the first side, a first engagement portion on the first connector is locked with the first locking portion of the locking member; and wherein when the second connector is inserted into the annular housing from the second side, a second engagement portion on the second connector is locked with the second locking portion of the locking member.
