Abstract (en)

[origin: WO2014113927A1] A method and an apparatus (10) are provided. The apparatus (10) comprises a receiver (16) configured to receive a handover request involving a first user equipment from a first base station and a transmitter (14) configured to transmit a handover response to the first base station. The handover request comprises an identity of a second base station, and the apparatus (10) is comprised in a third base station distinct from the first base station and the second base station. The invention relates to route calls internally in a radio access network.
