Abstract (en)
[origin: EP2949794A1] A spinning unit 2 includes a draft device 6 adapted to draft a fiber bundle F, a pneumatic spinning device 7 arranged movable between a spinning position and a receded position that is located further away from the draft device 6 than the spinning position, and adapted to produce a yarn Y at the spinning position by applying twists to the drafted fiber bundle F by injecting air to a spinning chamber 73, and an injecting device 14 adapted to inject air to a region C between the draft device 6 and the pneumatic spinning device 7. The injecting device 14 injects the air after the pneumatic spinning device 7 starts moving from the spinning position to the receded position.
