Abstract (en)
[origin: EP2949843A1] The invention relates to a security device for restricting the opening of a door or a window, wherein the security device comprises a base member, an attachment and an arm, wherein the security device is provided with a hinge pin for hingably coupling the arm to the base member about the axis of rotation, wherein both the base member and the arm are provided with bores for receiving the hinge pin in a direction of insertion, wherein the security device is provided with a first blocking element that, at least after receiving of the hinge pin in the bore of the base member, is arranged for blocking access to the hinge pin in a direction opposite to the direction of insertion, wherein the base member is provided with a first mounting channel intersecting with the bore and arranged for receiving the first blocking element.
