Abstract (en)
[origin: WO2014118712A1] The invention relates to an easy-to-handle gardening machine that is suitable for weeding small spaces. The gardening machine comprises a chassis (1) provided with: a means (2) for securing a gardening implement (3); a first movement member (4) for moving along the ground (S), arranged at the front of the chassis relative to the implement-securing means with reference to the use position; and at least one gripping handle (5). The machine is characterised in that it comprises: a second movement member (6) for moving along the ground, arranged behind the first movement member (4); at least one means (7) for positioning the implement-securing means relative to the ground, arranged on the chassis such that when the two movement members are kept in contact with the ground during use, a force (F) exerted on at least one part of the chassis moves the implement-securing means in translation (T) towards the ground relative to the movement members.
