Abstract (en)
[origin: WO2014118646A2] The invention relates to a decorative element comprising a number of stones (4) assembled in a closed frame (2) to form two decorative faces, the stones comprising two opposite external faces (10, 12), which are decorative, and internal faces serving as joins (20, 22) between these stones, and as edging (24, 26) with the interior contour of the frame (32), some of these internal faces (22, 24) having grooves (28) arranged inside the volume of the frame (2) and accepting strips (34) the ends of which cross the contour of this frame at two opposing points in order to be secured. According to the invention, said decorative element is characterized in that the interior contour (32) of the frame (2) has a protruding cross section which fits into corresponding channels made in the internal edging faces (24, 26) of the stones (4). Applicable for example to the creation of jewellery.
